Dear Dr. Janson, Associate Dean of Biology

I notice that you work in ecology, something I have taught at the High School level in Montana, and believe in its principles.

No organism in an ecological chain is protected by other levels of the biological system. The case of your employee, Sean Bouchie is very different. I was greeted with:

- 1) A UM legal services who protect a person who made a death threat over the phone while in your department.
- 2) No one could tell me about computer policy 1303.1 which prohibits excessive computer use, something Mr. Bouchie does at your department, proven by a fax: 21 hours on a site. He has violated this policy for MORE than two years.
- 3) Your own employees putting me on hold for 15-20 minutes, AND forwarding me to the public safety.
- 4) Mr. Bouchie defames people on the computer on university time (lots of it).
- 5) A university should not cover up criminal behavior.

Tell Mr. Bouchie to find a good lawyer for saying that I threatened him. I only make promises.

FYI, a UM law student practiced law without a license (disbar able offense in most places) and was protected by the State, and Attorney General. This sounds familiar for your employee, Mr. Bouchie. Mr. Aronofksi (sic) believes that an employee can surf the internet....please show him UM Regents policy 1303.1 and tell him his reputation for this kind of thing is well ahead of him.

Discipline and/or terminate Mr. Bouchie because in ecology, we all are at the mercy of a higher energy level, instead of protected by one.
